Reynold Sound & Lighting Services Takes India by Storm

Share: [f](#) [g+](#) [t](#)

Reynold Sound & Lighting Services in Bangalore, India, announced that its new Meyer Sound PA system has taken India by storm, entertaining tens-of-thousands of listeners throughout the nation in recent weeks. The new system, comprised of MSL-4s and a host of self-powered subwoofers, arrived in early December and was soon out the door for a 1,500 person INFOSYS (India's leading infotech company) corporate event in the city of Bangalore.

Other high-profile events to take place in recent weeks include the Miss India competition for an audience of 3,000 at the Lalith Kala Thoranam Amphitheatre, and the 6,000-attendee concert at the Nehru Indoor Stadium for South Indian Music Director, Deva, and his 40-piece orchestra.

"The response has been so tremendous that we've been using Meyer for a variety of concerts, including a rock concert in Bangalore at the Webbs ground for 3,000 people by the Indian group Moksha. The clarity of the system left everyone amazed and the people of Bangalore have started raving about it." said Felix Remedios of Reynold Sound & Lighting Services.

Another high-profile event which utilized the new system was film star Rajnikant's 25-year anniversary in the Indian film industry, an event which attracted 75,000-plus guests.

"Incredible sound," said Santosh Menon, Stage 3 Event Manager for Rajnikant's anniversary celebration. "The Meyer system made all the difference to the show... No one is going to accept anything less for future concerts."

Remedios added that everyone from performing artists, to technical personnel, to people in the audience just love the sound of the new Meyer Sound system. "In fact one of the music tracks at the Miss India show had bells playing, and the sound of the bells were so clear and natural that I actually felt that someone in the audience was ringing those bells."

With the incredible response that the company has been receiving from throughout the country, including far-away locations such as Delhi and Calcutta, Remedios said that it was well worth the investment.

"The system is so easy to work with," he said. "It's the closest thing to a plug'n'play system that you can find in the market, without compromising the quality."
